FIRST TIME **CRYSTAL** COMMERCIAL IN AHMEDABAD

GLASS BRICKS

STONE BRICKS

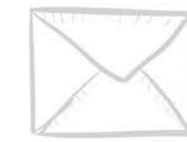

A building made of glass bricks is definitely there and yet you can see right through it. It has a sense of both presence and absence, solidity and transparency. It is really a very poetic building.

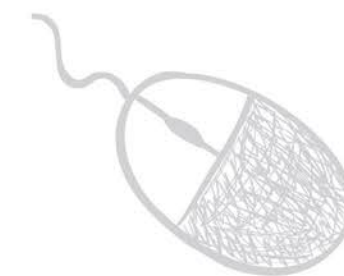

The solid glass bricks are a revolutionary building material and will enable future cityscapes and urban experiences that were previously unimaginable. Not only is it totally aesthetically innovative, but a brick made of glass also radically reduces the amount of waste materials. All of the glass is completely recyclable and any imperfect bricks can be melted and remoulded. The entire building could be melted down, resurrected and given a new life. A glass brick is also – interestingly – stronger than a concrete one.

The building was also designed with renewable energy sources: heating and cooling comes from a pipe that goes deep underground and is able to maintain the indoor climate throughout the year.

Intensive craftsmanship and accuracy was required in the process, and tools such as lasers and laboratory UV lights.
